

# A97 Pipeline Replacement Project

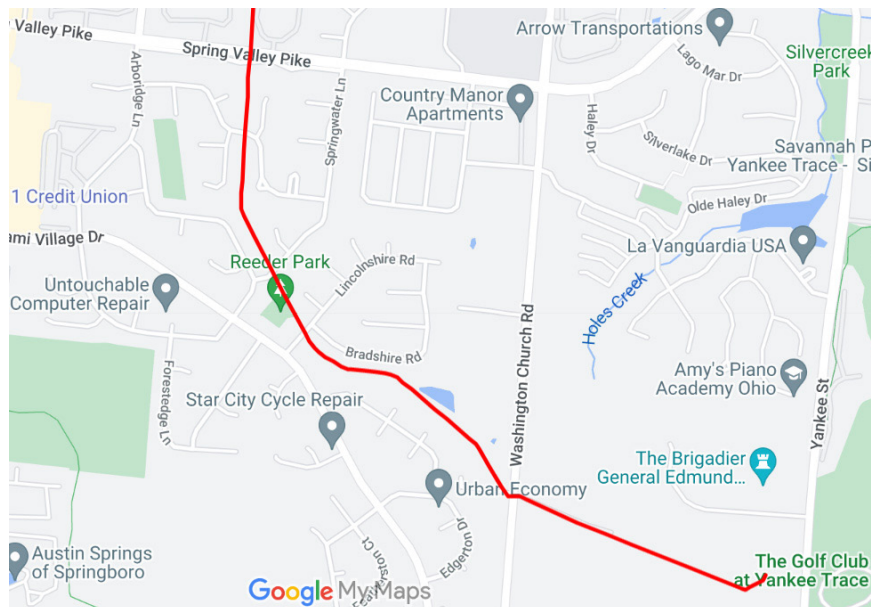

MIAMI TWP, OHIO

As a part of CenterPoint Energy's commitment to provide customers with safe and reliable gas service, we are required to conduct federally regulated pipeline testing, routine maintenance and replacement/relocation construction.

The project will be completed within the existing right-of-way (width varies). CenterPoint Energy's easements grant the right to "operate, maintain, repair, replace and remove" its gas pipeline. This project will require the entire right-of-way be cleared of all obstructions. Therefore, prior to construction, CenterPoint Energy will be clearing the right-of-way, including the removal of trees, shrubs, decorative or natural landscaping and all structures within the right-of-way. Right-of-way clearing will also include the removal of fencing that is within, on or impeding access to the right-of-way. The fencing will be reinstalled at CenterPoint Energy's cost after the completion of construction in a similar or better condition than it exists now.

CenterPoint Energy's subcontractors will perform the restoration of the project area after construction work has been completed and will be subject to weather conditions. CenterPoint Energy will provide a copy of the landowner's easement upon request. While CenterPoint Energy recognizes that this work can be inconvenient, it is vital for maintaining the integrity of its facilities.

**20"** Pipeline Replacement

**May 2023 to Sept. 2023**

CenterPoint Energy will replace an existing 20" natural gas transmission line between Yankee Street and Spring Valley Pike, beginning May with an estimated completion date during September 2023. Residents affected by construction will be notified of the work and timeline of the project.
